

# Enhancing Spatial Input on the Body

with a Smart-Ring

Andrea Bianchi, Seungwoo Je, Hyelip Lee, Ian Oakley

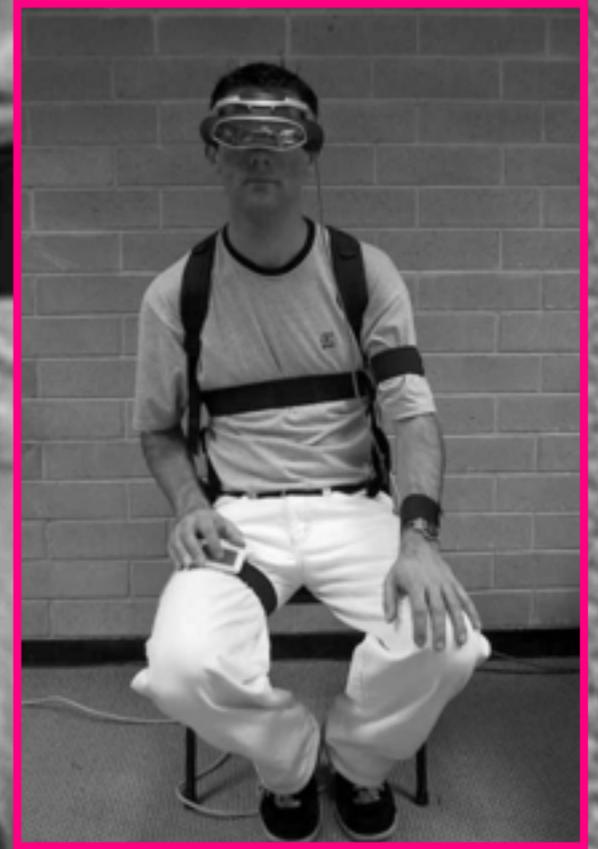

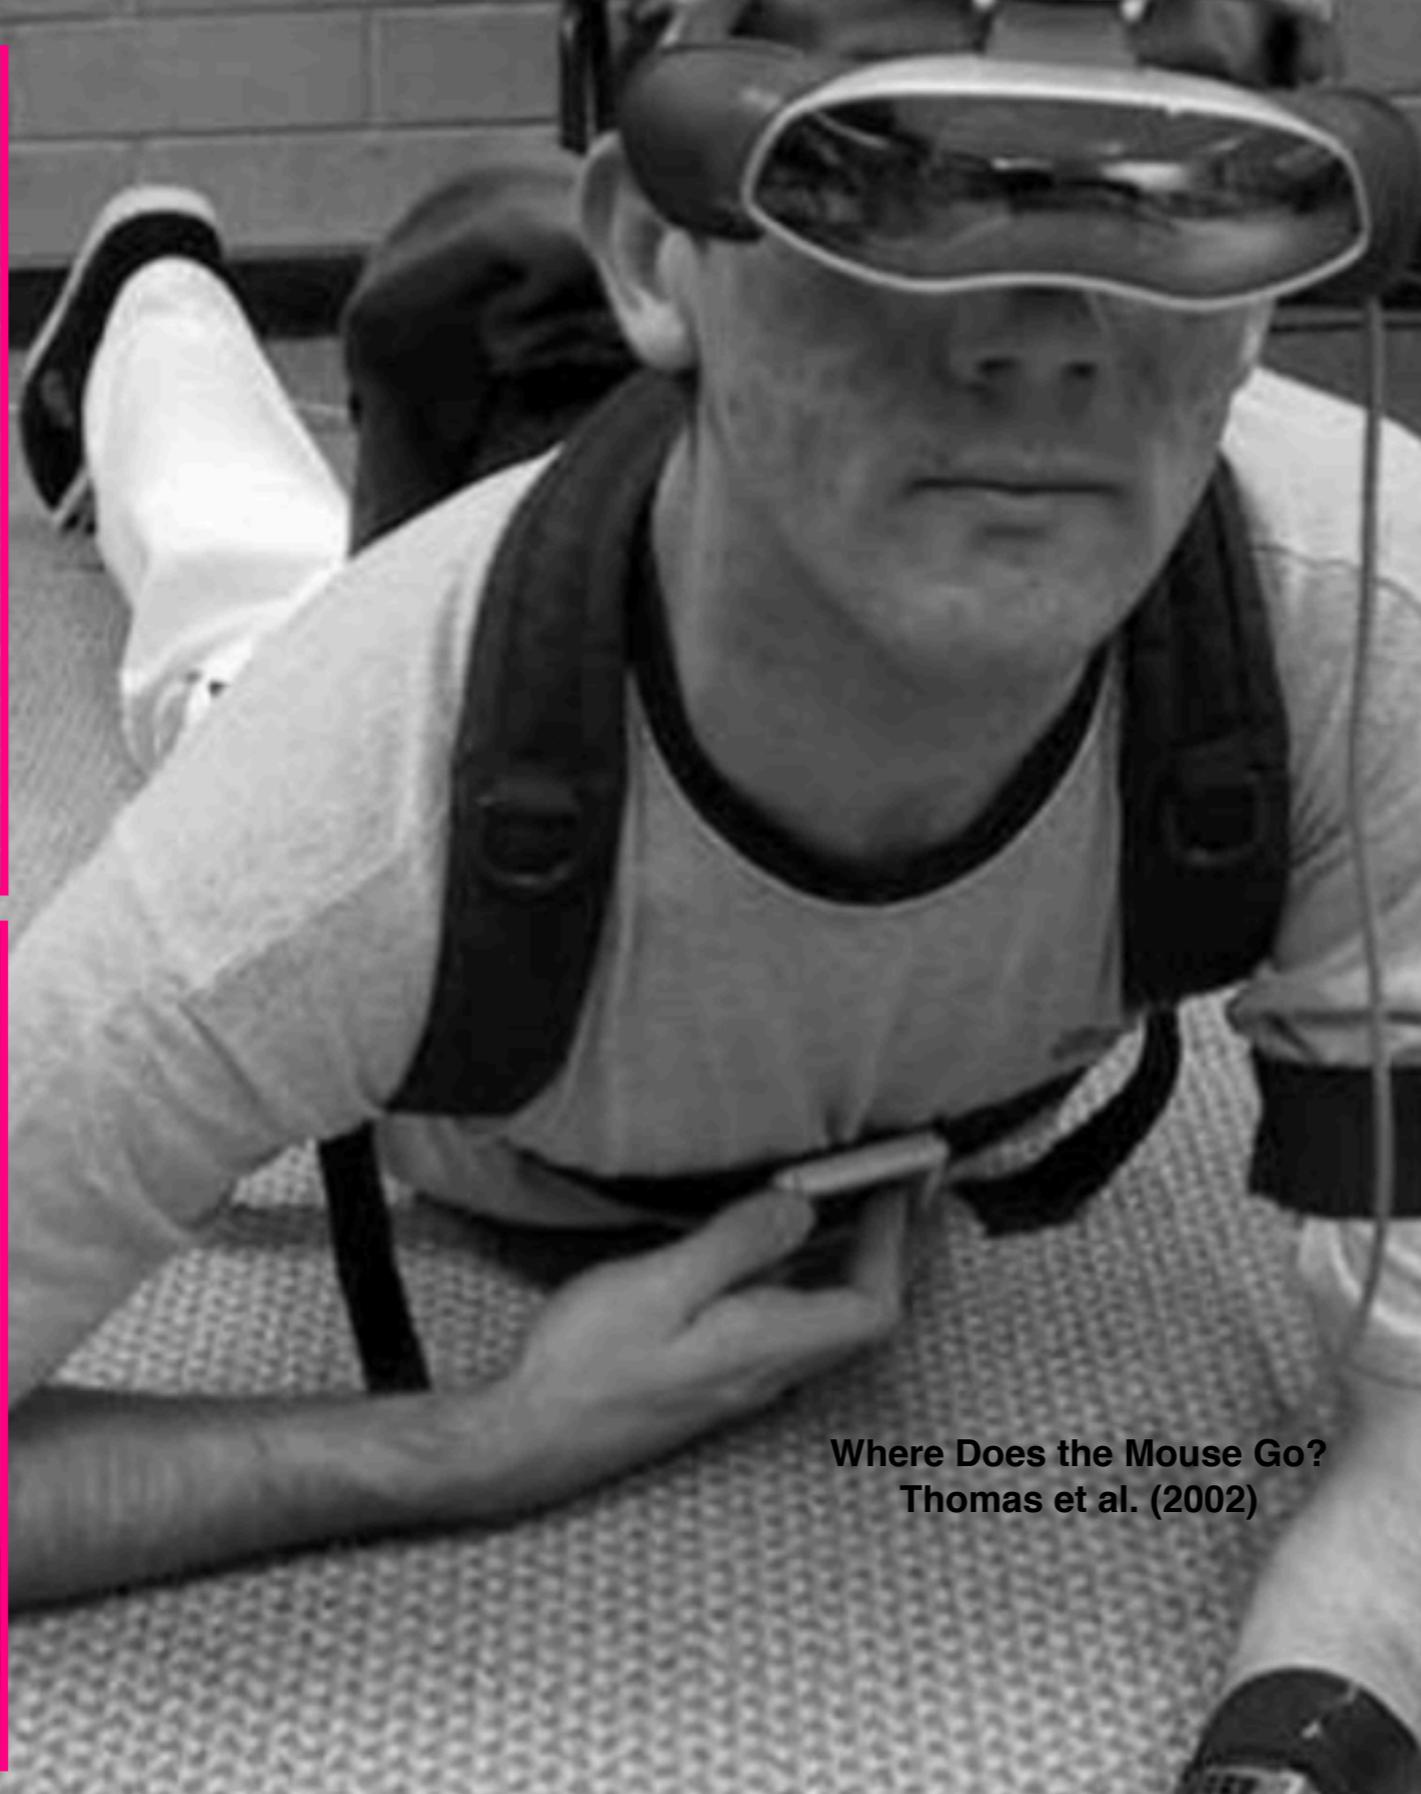

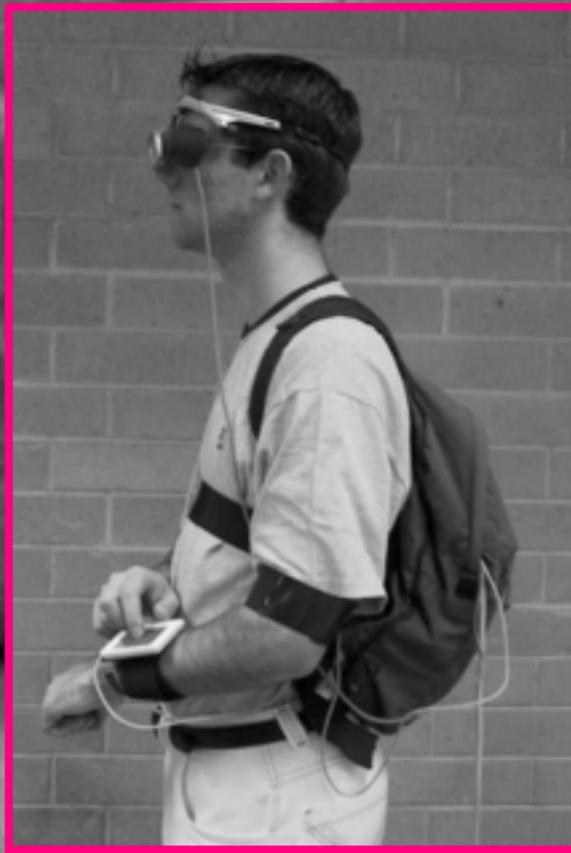

**MAKinteract**

*A common problem*

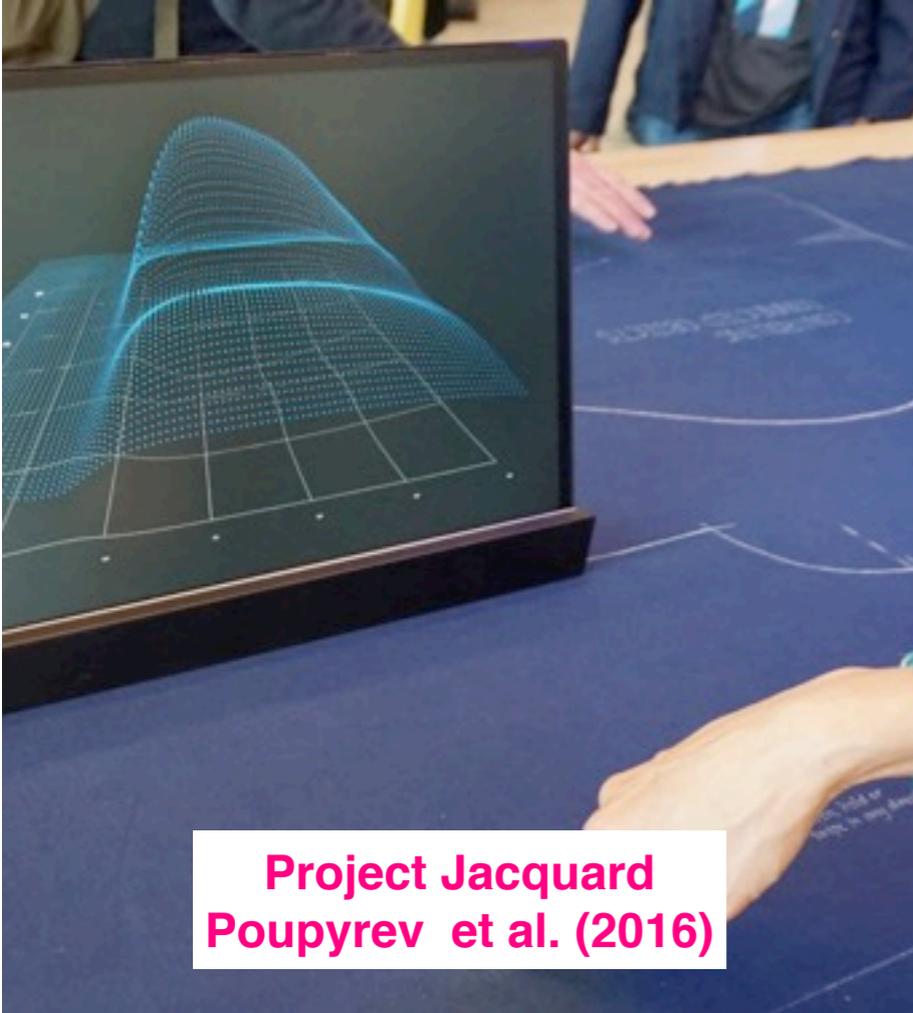

*Limited input space:  
constrains / precision*

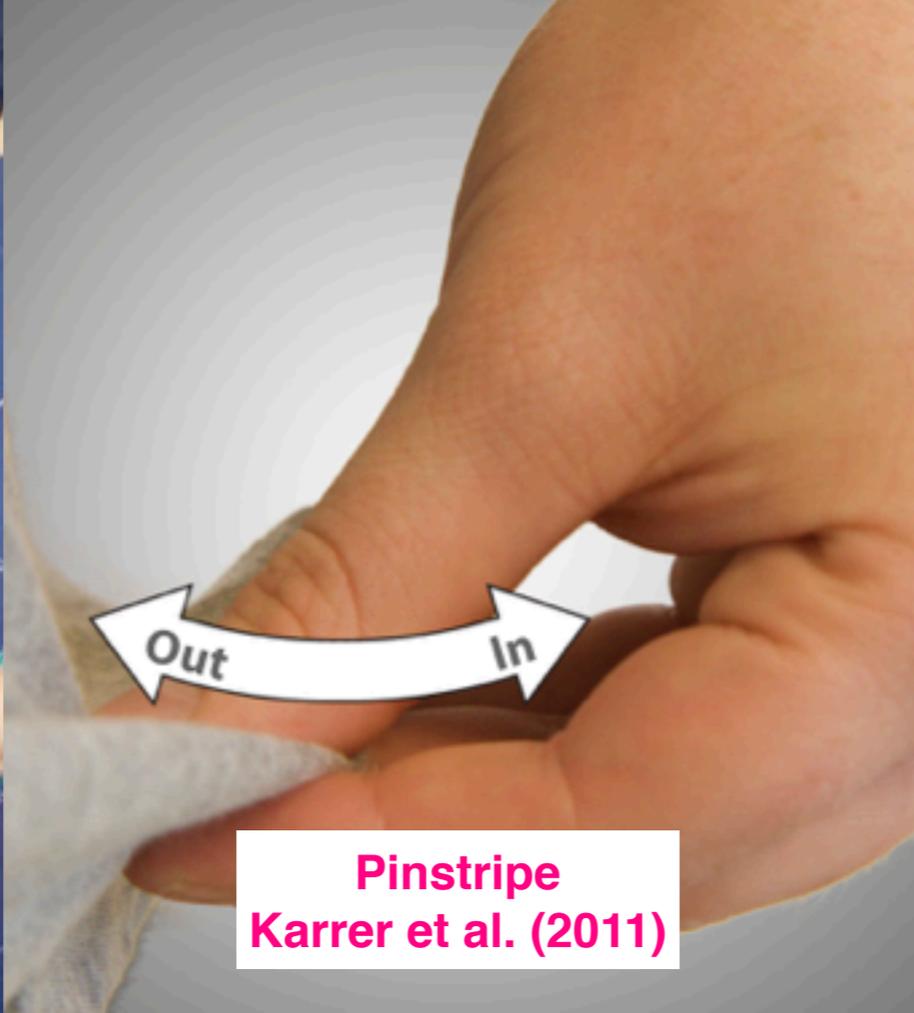

Where Does the Mouse Go?  
Thomas et al. (2002)

*Can we use body as an extension of the input space?*

**Project Jacquard**  
Poupyrev et al. (2016)

**Pinstripe**  
Karrer et al. (2011)

**FabriTouch**  
Heller et al. (2014)

**Capacitive Touch**  
Holleis et al. (2008)

**PocketTouch**  
Saponas et al. (2011)

**Skinput**  
Harrison et al. (2010)

*The body has a potentially  
huge input canvas*

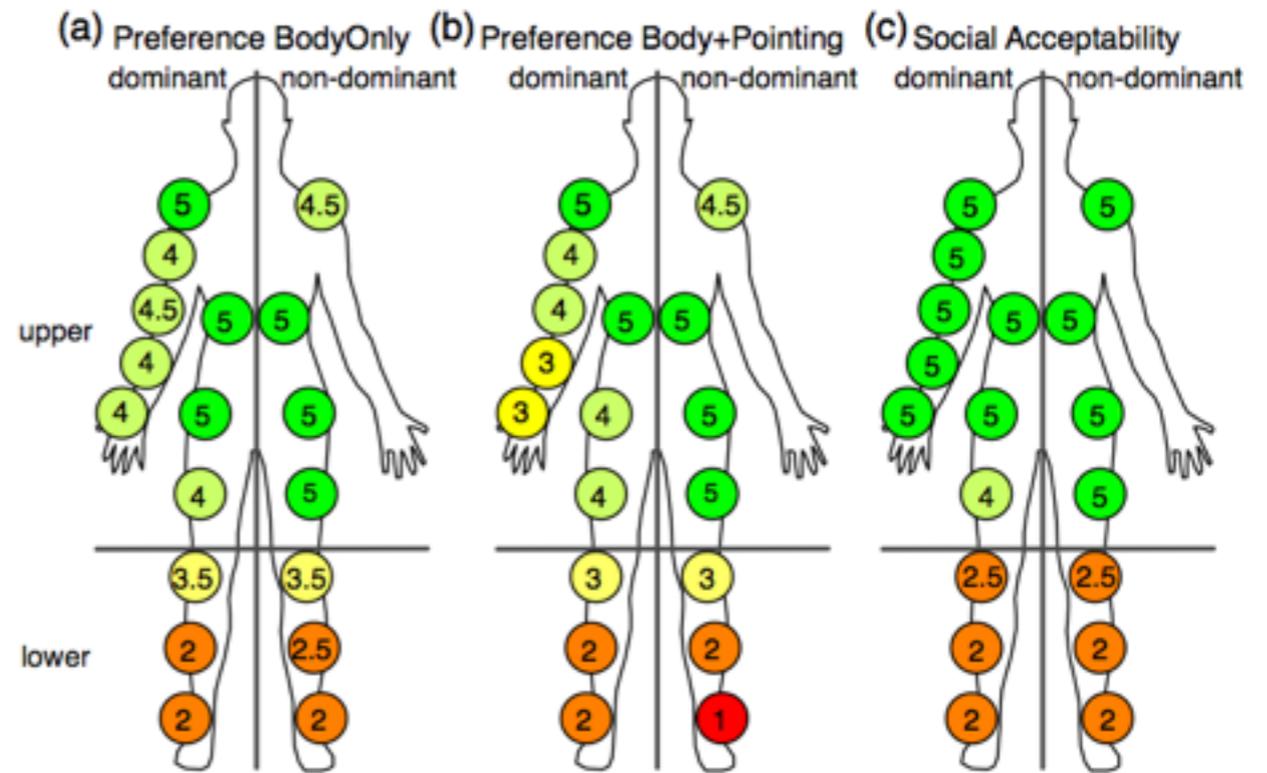

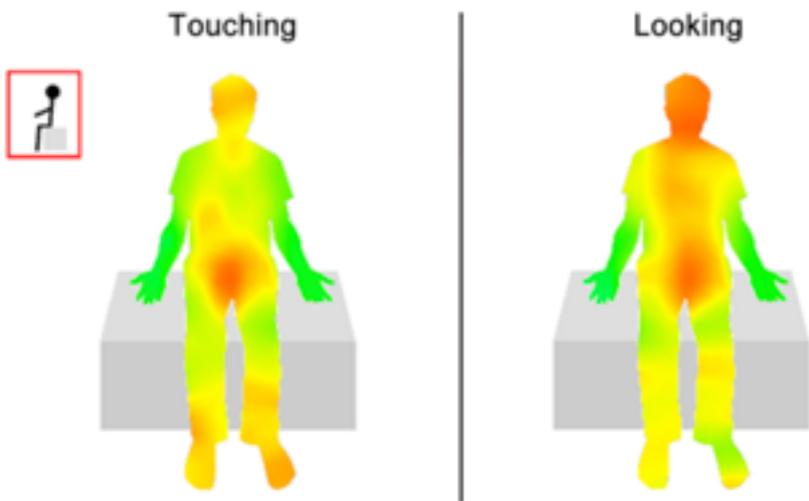

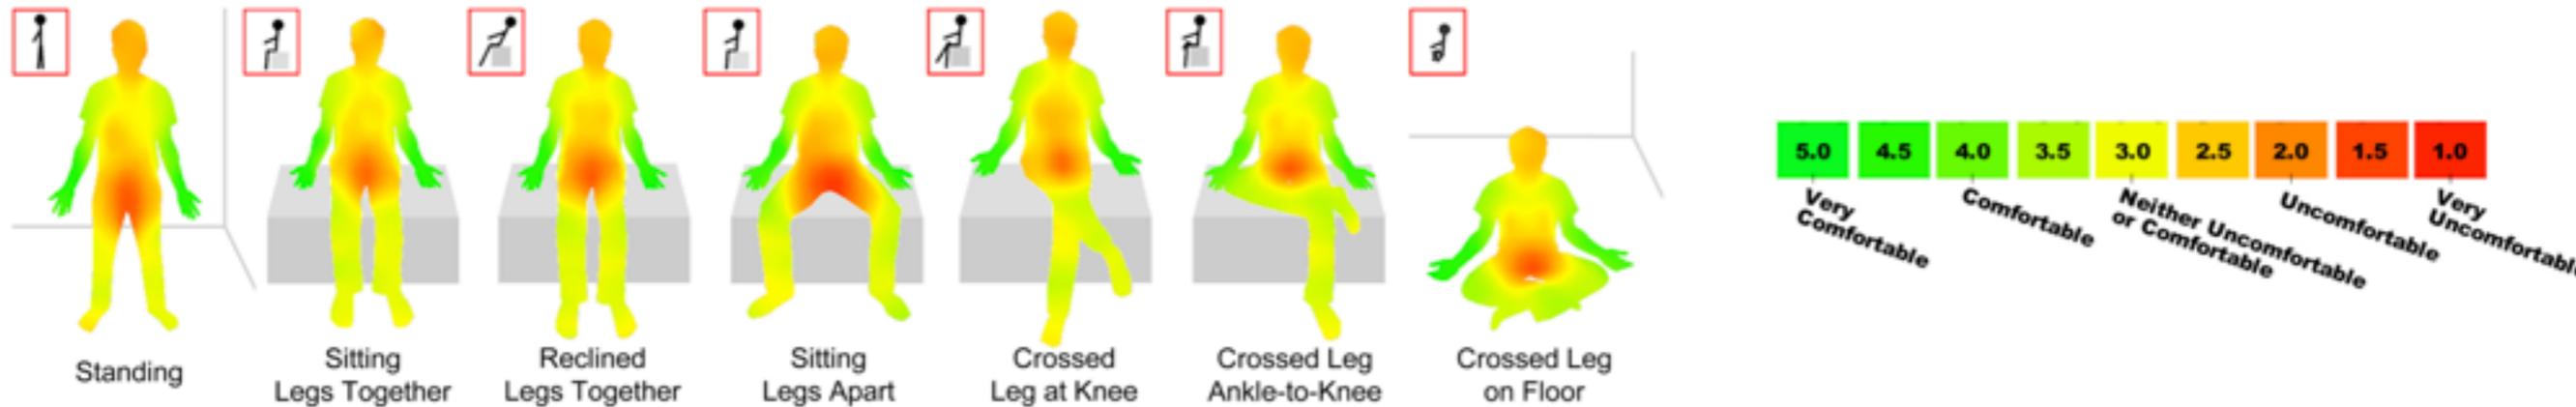

*Are all body parts suitable for input?*

# Where is ok to display information? Where is ok to touch?

## On-Body Projection

Harrison and Faste (2014)

## On-Body Touches

Wagner et al. (2013)

Figure 7. Median preference and acceptability rankings of on-body targets (from green = acceptable to red = unacceptable).

*The body has a potentially huge input canvas  
but **practical** eyes-free input space is small*

≈

*Limited input space:  
constrains / precision*

# *Touch + Ring*

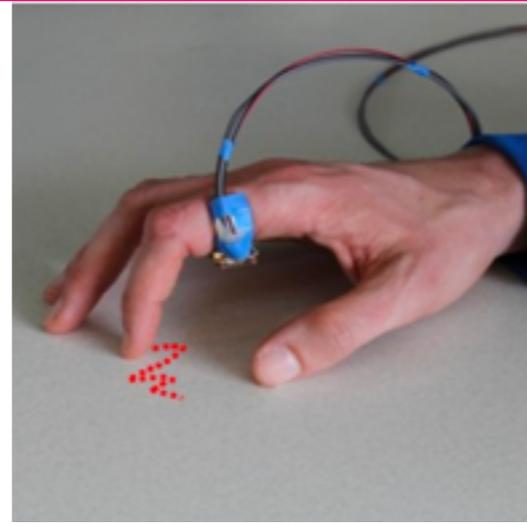

*Can we combine touch selections on the body with complementary input on a ring wearable to increase the input space at almost no cost?*

# Three Rings for the Elven Lords under the Sky...

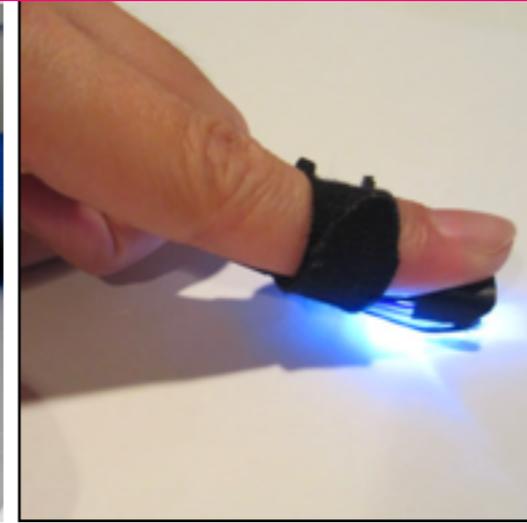

## Tracking

Tactile feedback on selection

# Experiment details

- 2x2 **repeated measure design** (Interface x number of targets)
- Interface fully **balanced**; targets with Latin square design
- **13 blocks** per target location (**3** training trials + **10** testing trials)
- **Errors** were **repeated** in random order
  
- **12 participants** (age: 20-35, M: 25.8, SD: 4.9), 4 female
- ~10 SUD compensation

# Results: errors

**ANOVA:** significant interactions and main effects ( $p < 0.001$ )

**Ring 4**

**Ring 8**

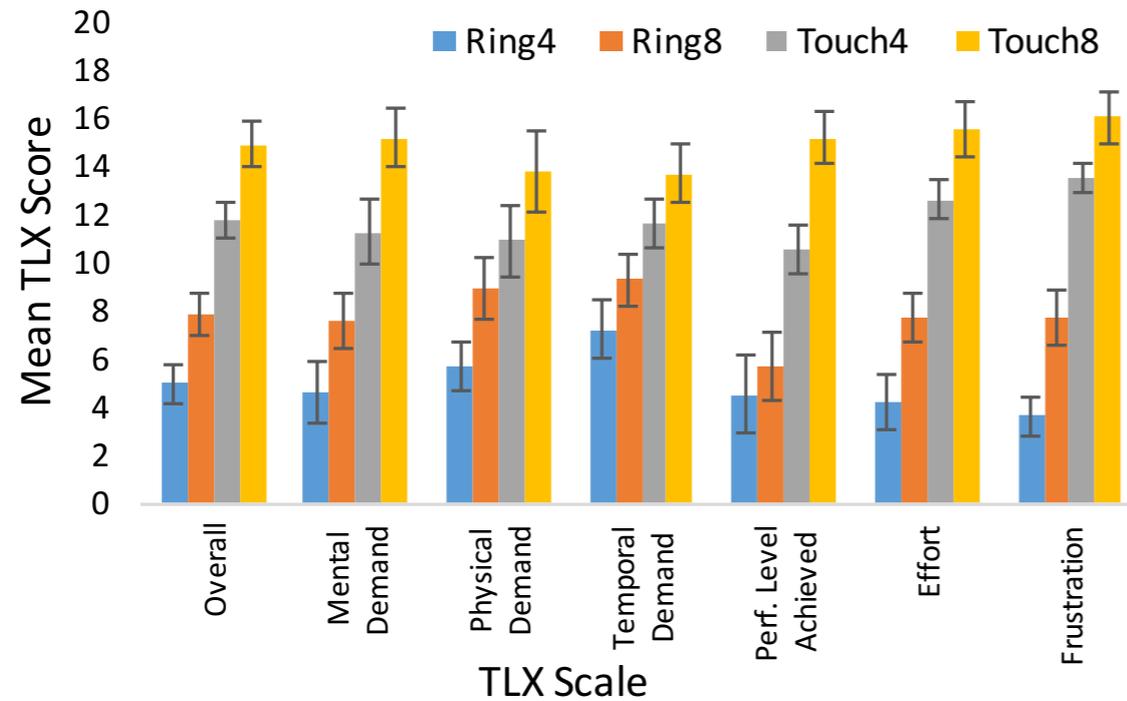

**Touch 4**

**Touch 8**

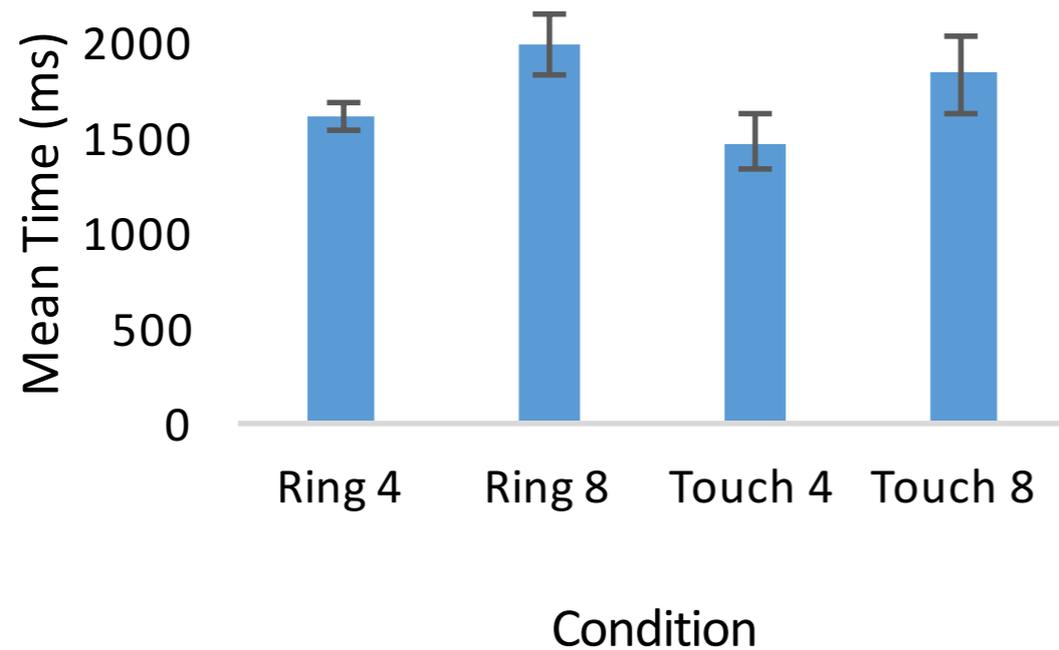

99.7%	99.6%
	99.5%

97.9%	94.8%	95.2%
82.7%	86.3%	84.0%
74.0%	81.1%	81.1%
98.1%	95.4%	96.1%

# Results: time and cognitive load

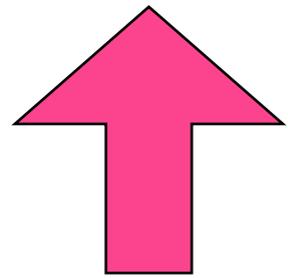

**ANOVA: significant** main effects ( $p < 0.001$ ) for workload

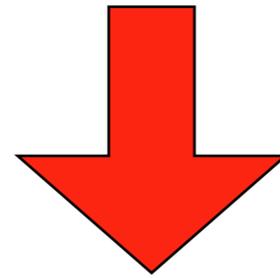

**ANOVA: not significant**

# Summary of findings

number of **targets**

**accuracy**

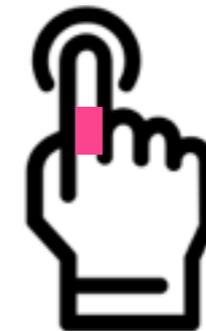

No **time** differences

Drastic differences for **errors** and **cognitive load** between

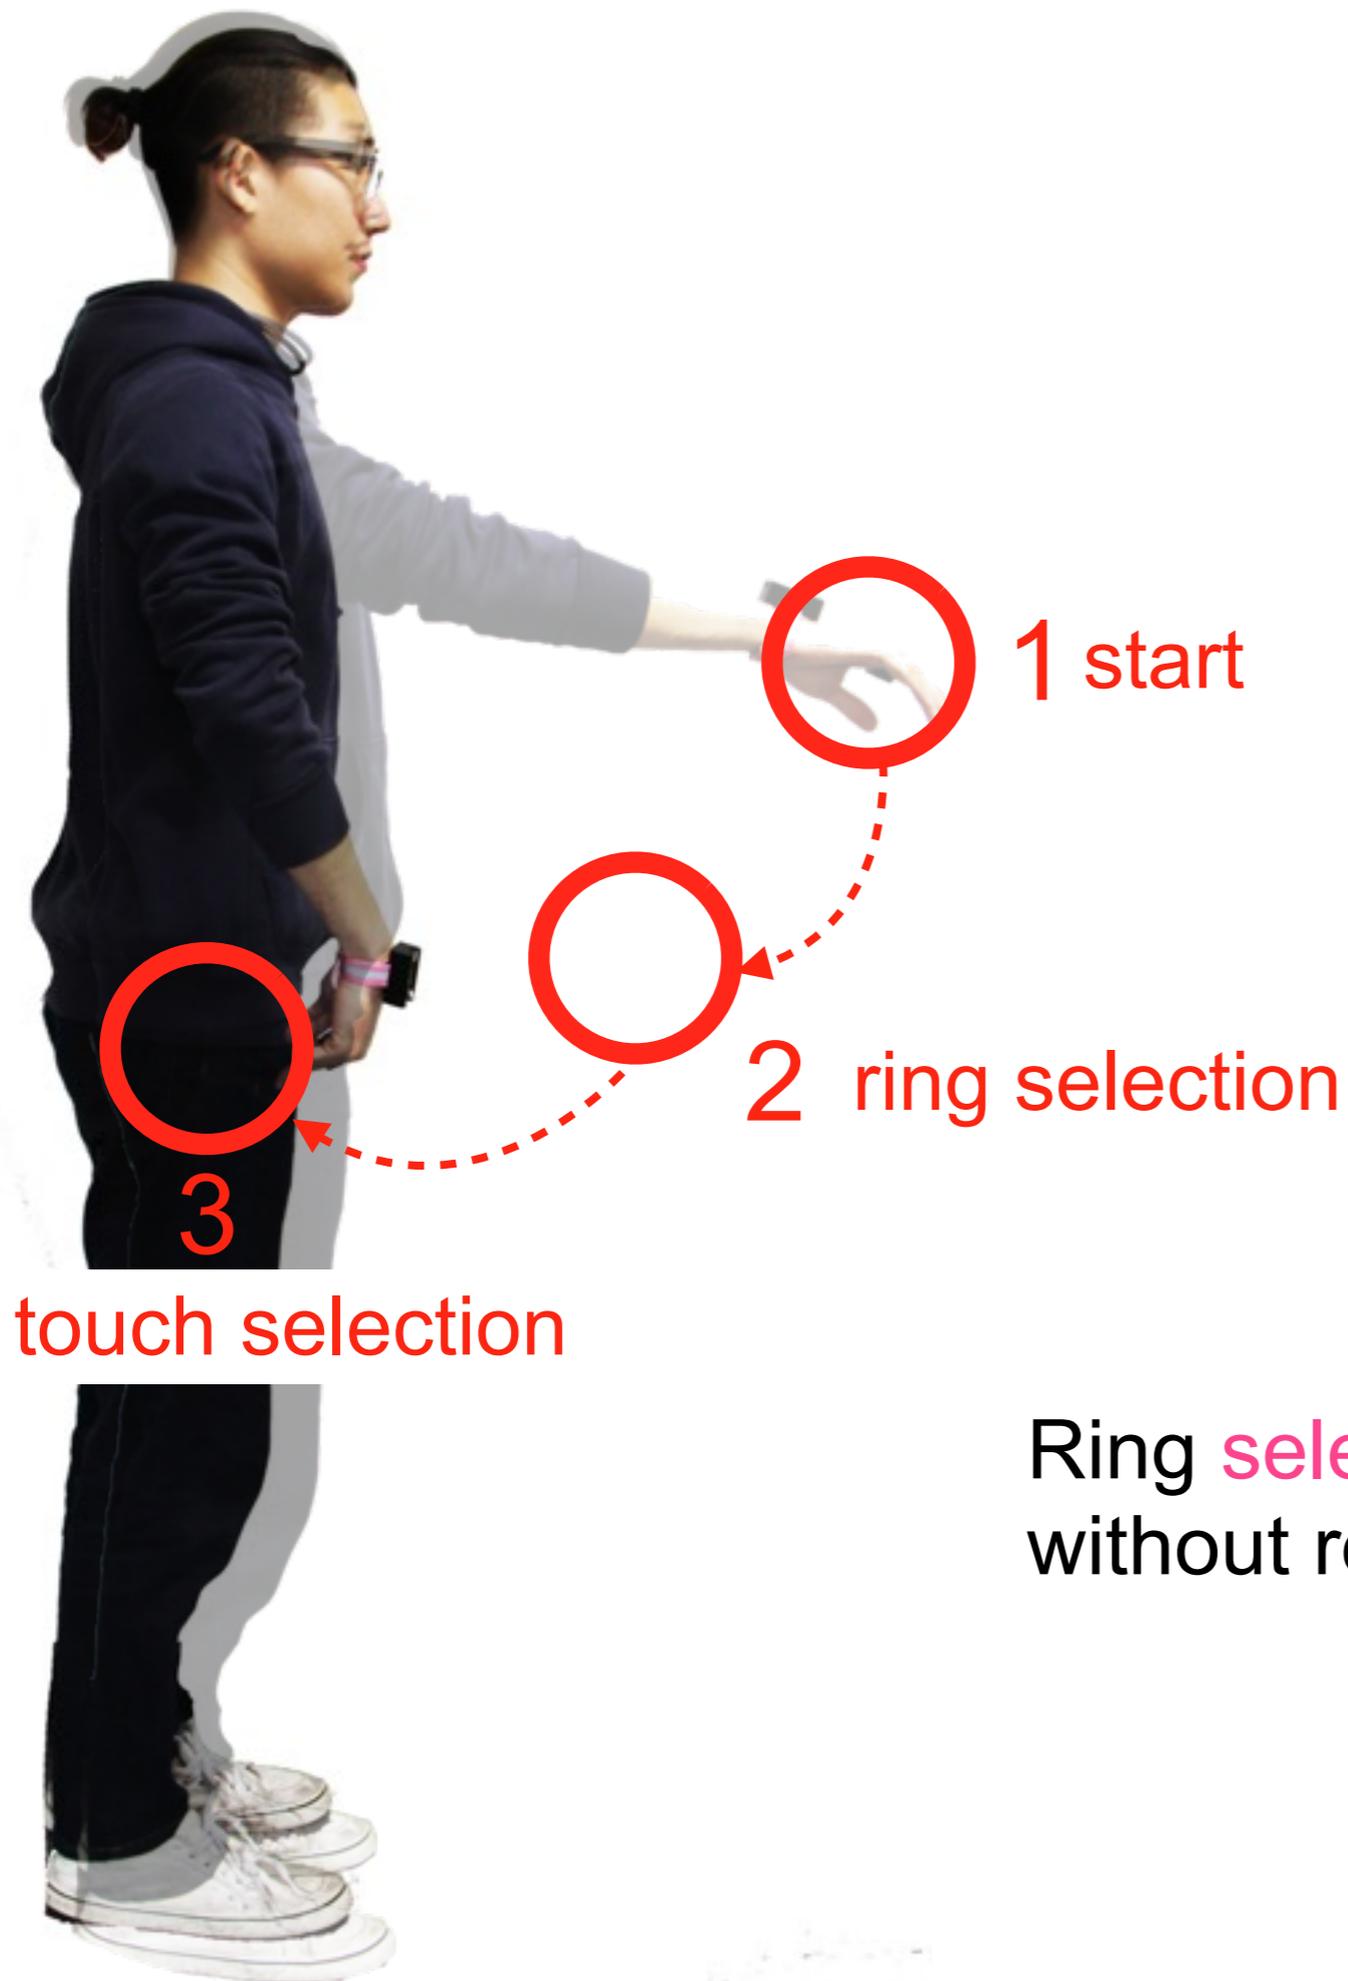

touch

and Ring+Touch

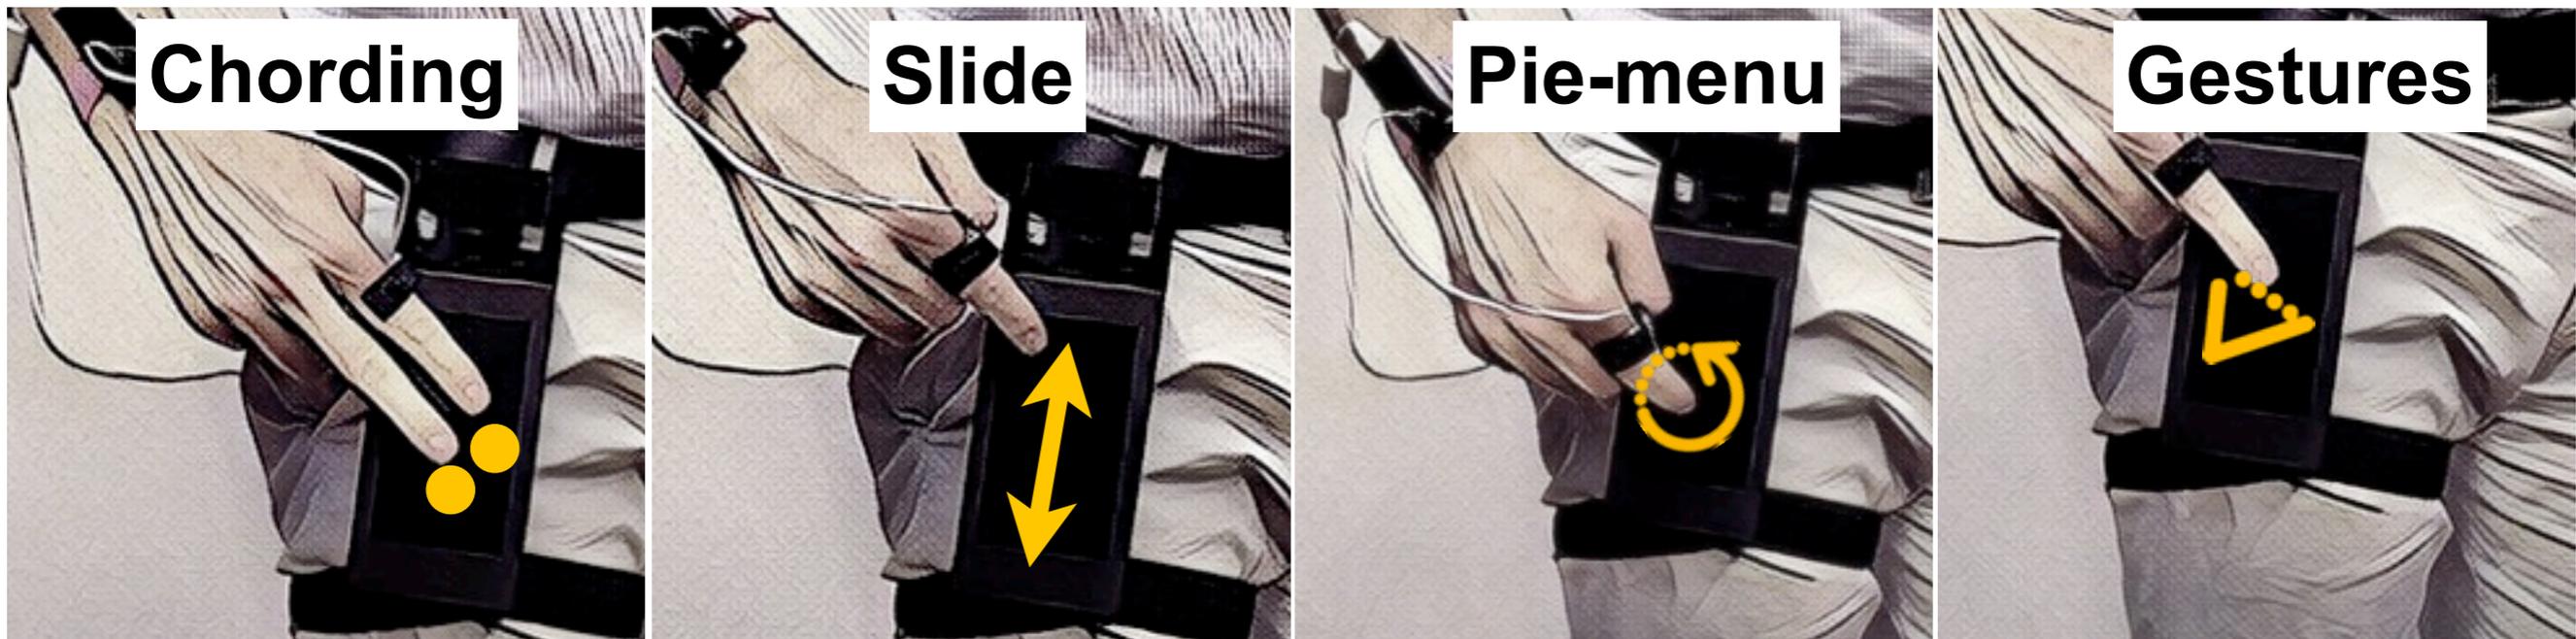

*So, what happened?*

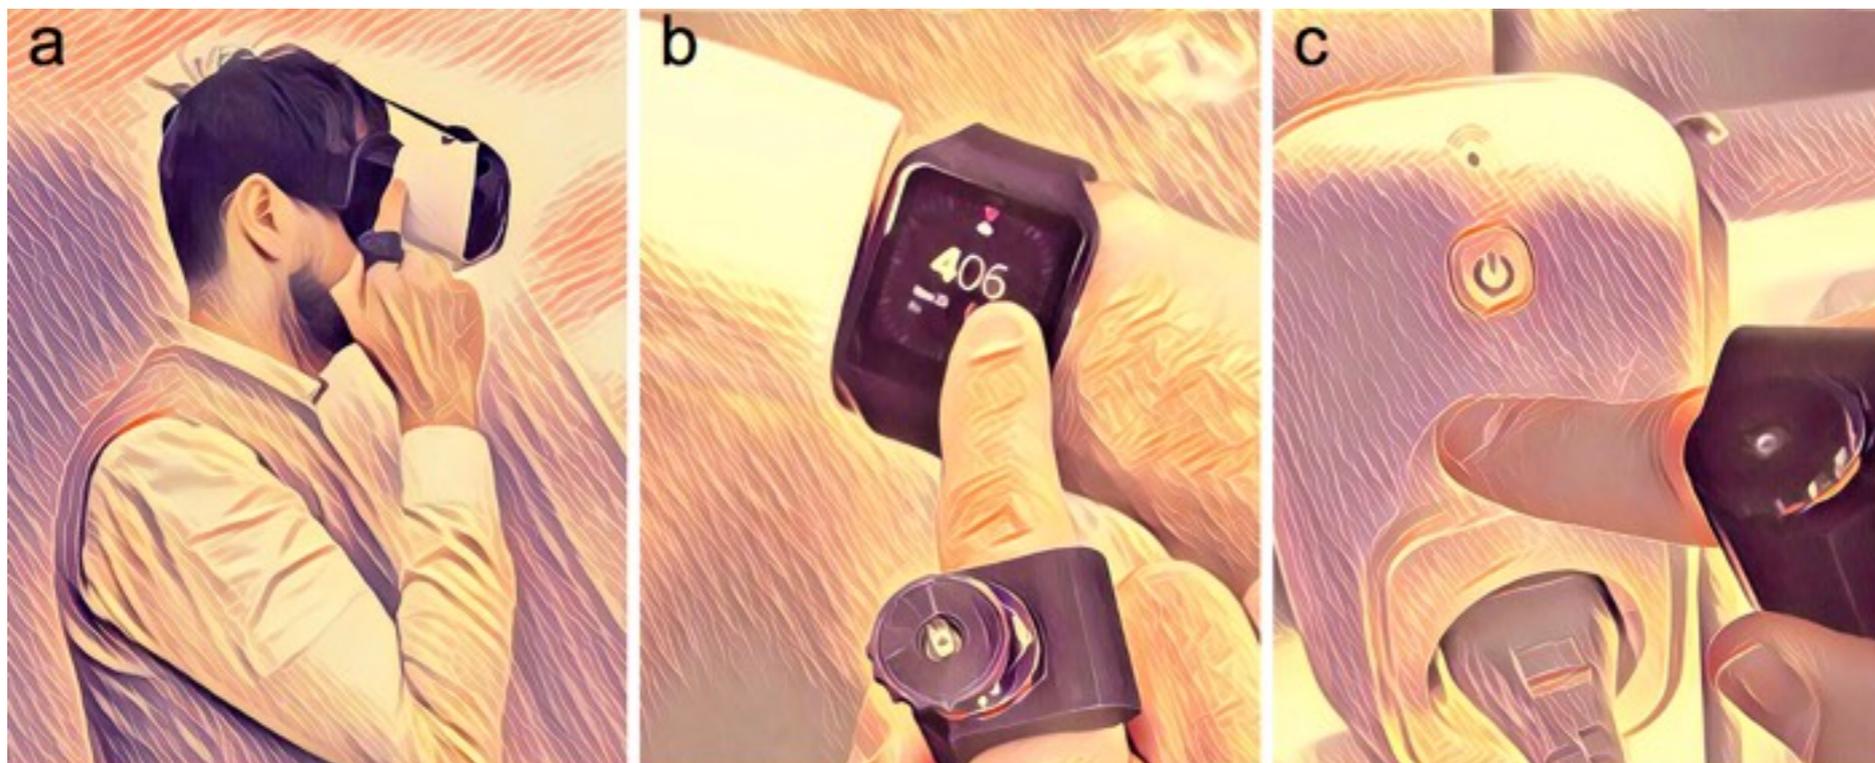

Ring selections were made in-air without reducing the interaction speed.

# Applications and future work

Interaction space suitable for **input on devices with small screens**

- a. Head-mounted interfaces
- b. Smart-watches/wearables
- c. IOT devices with no screens

## Summary

- Using Ring+Touch to increase input space
- No significant cost in terms of time, errors or cognitive load
- Applicability of results beyond on-body touches

# Questions?

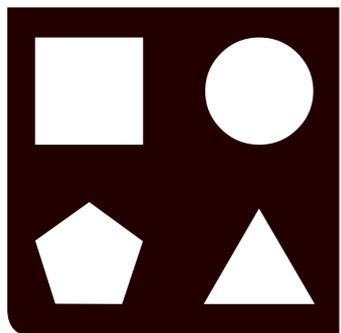

## Enhancing Spatial Input on the Body

with a Smart-Ring
